

“Complex transactions based on a plethora of confidential, controlled documents accessed by numerous participants are best managed through the use of an electronic data room.”

The Evans & Peck e-Data Room: from a company that fully understands the transaction, the client and the market.

As an international infrastructure-based advisory company that has supported governments, private sector enterprises and investment houses in the operations, conception, development of major projects and programs across a broad range of industries around the world. Evans & Peck understands the needs of the client, the project and the participants.

An easy, affordable, and totally auditable online solution

The Evans & Peck e-Data Room reduces the cost, increases the efficiency and guarantees the security, control and traceability of access to documents.

A virtual data room renders geography, time and physical constraints irrelevant as access is possible from anywhere a connection to the world-wide web is available. The facility is available 24 hours a day, seven days a week and without physical constraints any volume of data can be managed.

The Evans & Peck e-Data Room is a highly flexible and intuitive facility for collaboration, storage and sharing of documents with maximum security. It can be accessed only by authorised users.

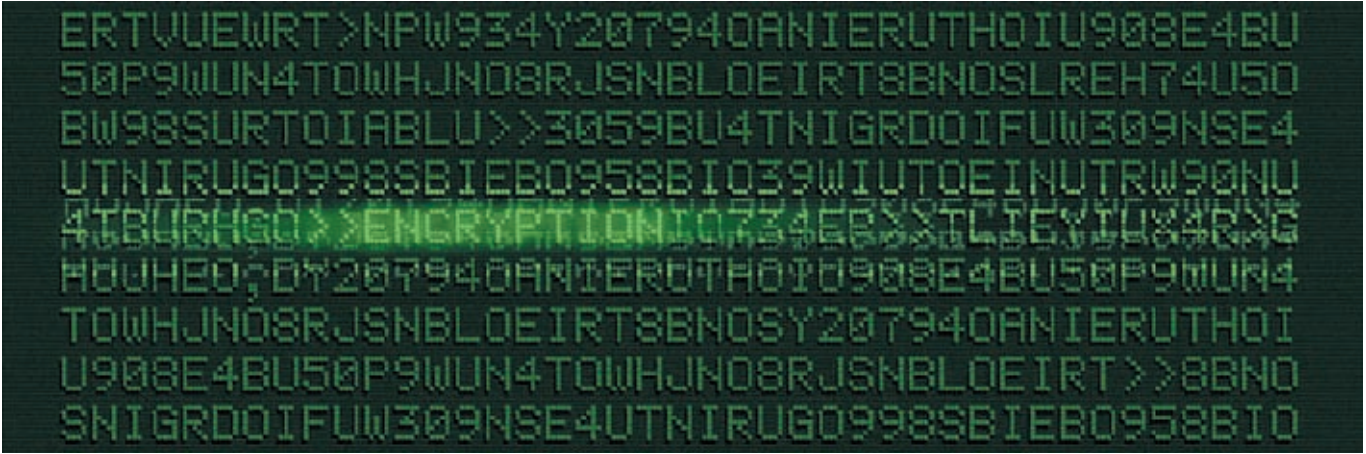

The e-Data Room can be used for online collaboration or business transactions such as tenders and bidding processes, due diligence, mergers and acquisitions, legal expert report preparation and board papers.

A secure facility which encrypts its transmissions and stored data

Client data is hosted in an Australian based data centre which has been independently accredited to the highest industry standards including ISO 27001 and SAS 70 Type II accreditation for mission-critical data requirements.

The e-Dataroom adheres to the highest levels of encryption and data transmission is encrypted using up to 256 bit SSL encryption, and 256 bit AES encryption on stored documents and from questions and answers recorded from within the data room.

Access to documents is controlled at a user by user and document by document level. In the case of complex projects, folders and sub-folders can be customized to allow highly organised folder access hierarchy, ensuring users only access the specific documents that you want them to. You can revoke document access at any time. If required, the system can also prevent users from printing or downloading documents and can apply custom watermarks to provide documents with an added level of protection against unauthorised forwarding.

Tamper-proof audit trail and detailed activity reports

All user access and activity is recorded and is traceable. The system meets both corporate and regulatory compliance requirements and can generate customised activity reports showing which documents have been viewed, how often and by whom.

Customised to meet individual specifications, the e-Data Room offers convenience and a comprehensive array of features

Individual customisation can include a corporate or project banner, or logo and a unique URL. It supports many languages including Chinese, Spanish, French and German.

The search function uses document or folder names and searchable key words. Authorised users also receive email alerts when new or updated documents have been uploaded.

The Evans & Peck e-Data Room also offers a question and answer facility (Q&A) which includes a "frequently asked questions" (FAQ) module to enable a fast, easy, safe and auditable way of managing the flow of questions and answers.

An easy and affordable solution for a complex problem

The Evans & Peck e-Data Room is quick and easy to establish – the facility can be fully set up in a matter of hours and needs no additional hardware or software.

Evans & Peck provides a tailored, simple and flexible monthly pricing structure, ensuring value for money for each and every project.

Training is available and support 24 hours a day, seven days a week

While training is offered, most people find that the facility is easy and intuitive to use and that guidance is not required.

However, support is provided 24/7 by a dedicated team of experts if required to help manage the site. Training is available and support 24 hours a day, seven days a week

Provided by a company that understands the transaction.
